1. Project Objective

The objective of the report is to explore the Mcdonald data set ("Mcdonald.csv") in R and generate insights about the data set. This exploration report will consists of the following:

- Importing the dataset in R
- Understanding the structure of dataset
- Graphical exploration
- Descriptive statistics
- Insights from the dataset

2. Assumptions

Following assumption we made for this analysis

- The Data Provided to us was not tempered.
- Linearity - Linearity assumes a straight line relationship between each of the two variables.
- Homoscedasticity - Homoscedasticity assumes that data is equally distributed about the regression line.

3. Exploratory Data Analysis Step by step approach

A Typical Data exploration activity consists of the following steps:

1. Environment Set up and Data Import
2. Variable Identification
3. Univariate Analysis
4. Bi-Variate Analysis
5. Outlier Identification
6. Feature Creation & Exploration

We shall follow these steps in exploring the provided dataset.

3.1 Environment Set up and Data Import

3.1.1 Install necessary Packages and Invoke Libraries

Following are the Libraries are used in the analysis

Package	Library
dplyr	dplyr

ggplot2	ggplot2
corrplot	corrplot
DataExplorer	DataExplorer

Code for installing library

```
#Libraries Required for Analysis
library(dplyr)
library(ggplot2)
library(corrplot)
library(DataExplorer)
```

Please refer to Appendix A for Source Code.

3.1.2 Set up working Directory

Setting a working directory on starting of the R session makes importing and exporting data files and code files easier. Basically, working directory is the location/ folder on the PC where you have the data, codes etc. related to the project.

Command for installing library

```
#Setting the Working Directory
setwd("C:/Users/dignitas/Desktop/Learning/Mcdonald/Home 1")
getwd()
```

Please refer to Appendix A for Source Code.

3.1.3 Import and Read the Dataset

The given dataset is in .csv format. Hence, the command 'read.csv' is used for importing the file.

Command for Read the Dataset

```
#Importing the Data
myData = read.csv("Mcdonald.csv")
```

Please refer to Appendix A for Source Code.

3.2 Variable Identification

Functions is used for variable identifications with there functions:

- class(myData): To identify the class of Data
- str(myData): compactly display the (abbreviated) contents of lists.
- names(myData): Names of DataFrame variable
- dim(myData): Dimensions of Dataframe
- head(myData): Display top 6 elements of Variables
- tail(myData): Display last 6 elements of variables

3.2.1 Variable Identification – Inferences

Our Data contain 260 obs. of 24 variables with 3 variables as factors while others are numerical data.

Column name of our Data are:

- "Category"
- "Item"
- "Serving.Size"
- "Calories"
- "Calories.from.Fat"
- "Total.Fat"
- "Total.Fat.PDV"
- "Saturated.Fat"
- "Saturated.Fat.PDV"
- "Trans.Fat"
- "Cholesterol"
- "Cholesterol.PDV"
- "Sodium"
- "Sodium.PDV"
- "Carbohydrates"
- "Carbohydrates.PDV"
- "Dietary.Fiber"
- "Dietary.Fiber.PDV"
- "Sugars"
- "Protein"
- "Vitamin.A.PDV"
- "Vitamin.C.PDV"
- "Calcium.PDV"
- "Iron.PDV"

We also checked the top 6 and last 6 elements of each variable with command head and tail

Command for variable identifications and Output

```
> #General Data Analysis
> ##Check the Class of Data
> class(myData)
[1] "data.frame"
>
> ##First Inspection of Dataset using str
> str(myData)
'data.frame': 260 obs. of 24 variables:

```

3.3 Univariate Analysis

“summary” is used to find the minimum, 1st quartile, mean, median , 3rd quartile and max of the Data variables.

“plot_missing” is used to plot to find the missing value if exist in the myData. In our data no value was missing.

“plot_histogram” is used to plot the histogram of numeric variables.

Command for Univariate analysis with output

```
> ##find summary of myData to get Min,median,Mean and Max with First and 3rd quartile.
> summary(myData)
```

plot the missing value

Histogram Plot

3.4 Bi-Variate Analysis

`cor(CorData)` is used to identify Correlations between the data.

Variable having correlations of more than 0.85 are as follows

1. "Calories" - Calories.from.Fat, Total.Fat, Total.Fat.PDV
2. "Calories.from.Fat"- Calories, Total.Fat, Total.Fat.PDV
3. "Total.Fat"- Calories, Calories.from.Fat, Total.Fat.PDV
4. "Total.Fat.PDV"- Calories, Calories.from.Fat, Total.Fat,
5. "Saturated.Fat"- Saturated.Fat.PDV
6. "Saturated.Fat.PDV" - Saturated.Fat
7. "Cholesterol"- Cholesterol.PDV
8. "Cholesterol.PDV"- Cholesterol
9. "Sodium"- Sodium.PDV, Protein, Iron.PDV
- 10 "Sodium.PDV"- Sodium, Protein, Iron.PDV
- 11 "Carbohydrates"- Carbohydrates.PDV
- 12 "Carbohydrates.PDV" - Carbohydrates
- 13 "Dietary.Fiber" - Dietary.Fiber.PDV
- 14 "Dietary.Fiber.PDV" - Dietary.Fiber
- 15 "Protein" - Sodium Sodium.PDV
- 16 "Iron.PDV" - Sodium Sodium.PDV

```
> Data_cor <- cor(CorData)
```

```
> Data_cor
```

3.5 Missing Value Identification

`plot_missing(myData)` is used to check the missing variable and our data has no missing value

```

> ##plot the missing value
> plot_missing(myData)

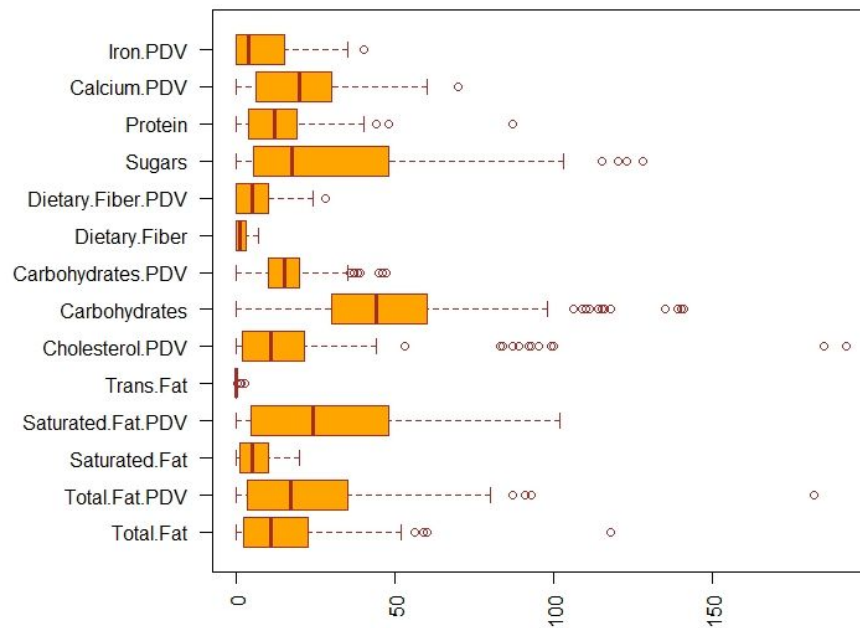

```

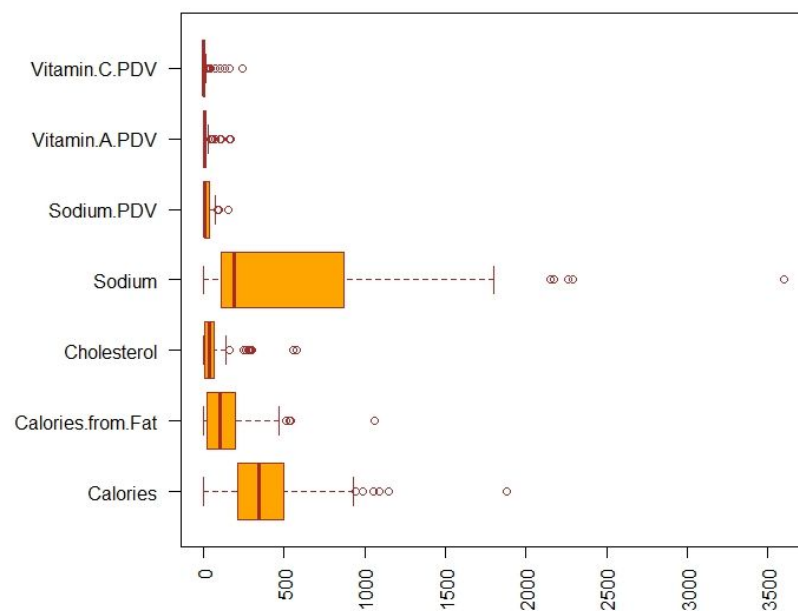

3.6 Outlier Identification

Outlier is identified using the Box Plot

Box Plot of Variables - 1

Box Plot of Variables - 2

Variable having Outlier are

- "Calories"
- "Calories.from.Fat"
- "Total.Fat"
- "Total.Fat.PDV"
- "Trans.Fat"
- "Cholesterol"
- "Cholesterol.PDV"
- "Sodium"
- "Sodium.PDV"
- "Carbohydrates"
- "Carbohydrates.PDV"
- "Dietary.Fiber.PDV"
- "Sugars"
- "Protein"
- "Vitamin.A.PDV"
- "Vitamin.C.PDV"
- "Calcium.PDV"
- "Iron.PDV"

3.7 Feature Creation

We rename the column name of data frame to easy and understandable access the data.

Table_Cat_Var is new table contains the Category and there no.of items.

CorData is used to get all numeric variable in single DataFrame

Data_cor is used to store the correlation value between the variables

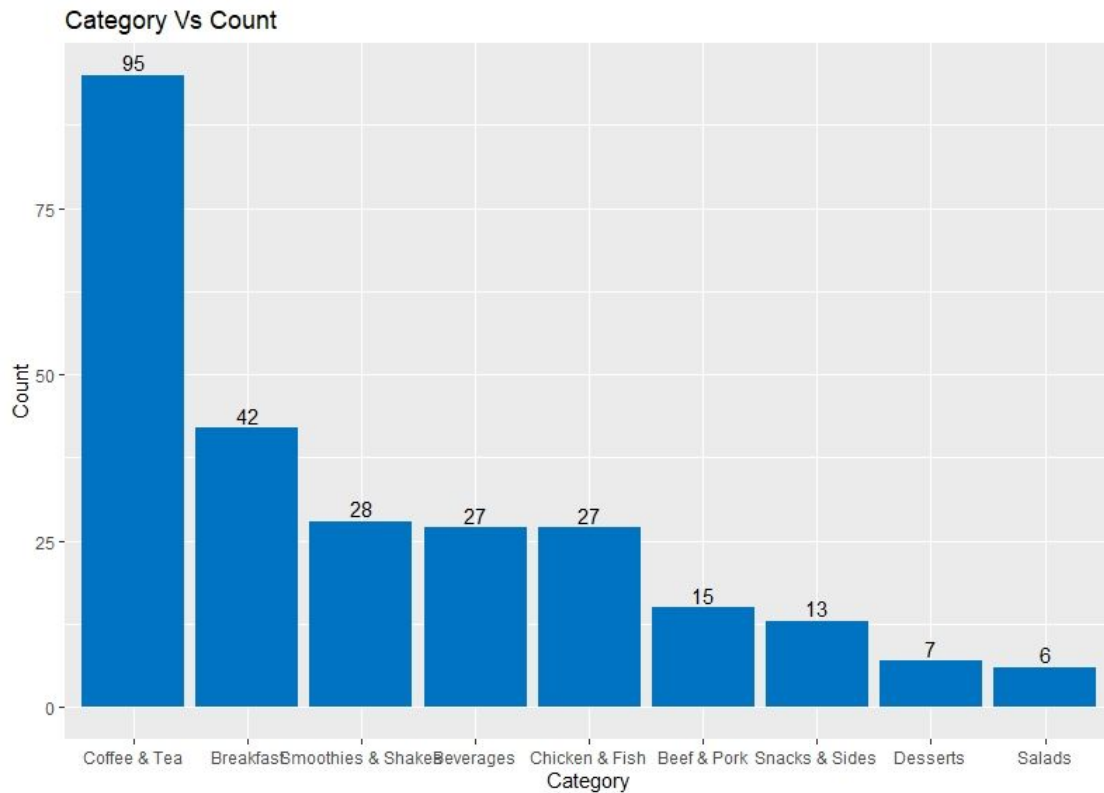

Table_Cat_Colestrol is new table contains Category and their total Cholesterol % value

4 Conclusion

6 Questions Asked and their solutions

Q1. Plot graphically which food categories have the highest and lowest varieties.

Ans. Coffee and Tea has maximum variety and Salads have minimum varieties.

Q2. Which all variables have an outlier?

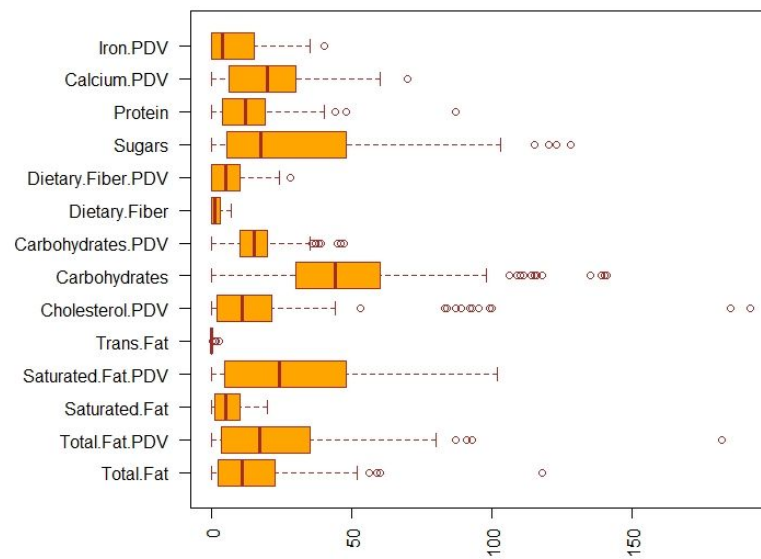

Ans. Variable having Outlier are

- "Calories"
- "Calories.from.Fat"
- "Total.Fat"
- "Total.Fat.PDV"
- "Trans.Fat"
- "Cholesterol"
- "Cholesterol.PDV"
- "Sodium"
- "Sodium.PDV"
- "Carbohydrates"
- "Carbohydrates.PDV"

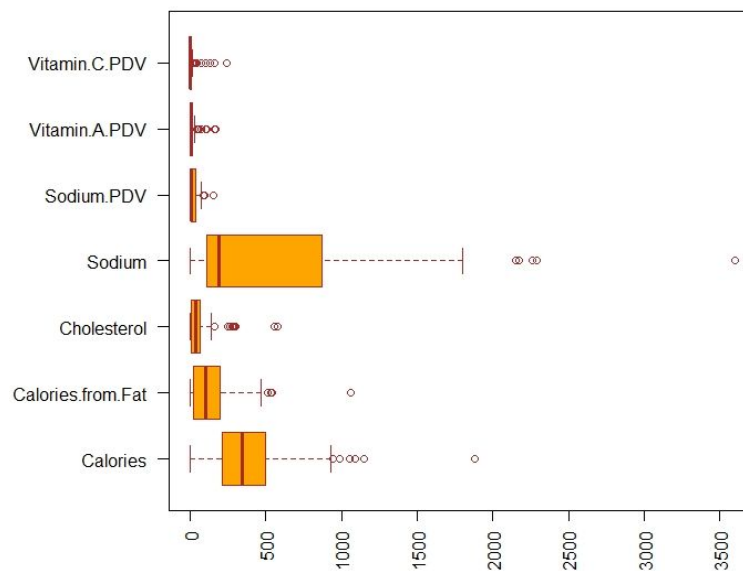

- "Dietary.Fiber.PDV"
- "Sugars"
- "Protein"
- "Vitamin.A.PDV"
- "Vitamin.C.PDV"
- "Calcium.PDV"
- "Iron.PDV"

Outlier is identified using the Box Plot

Box Plot of Variables - 1

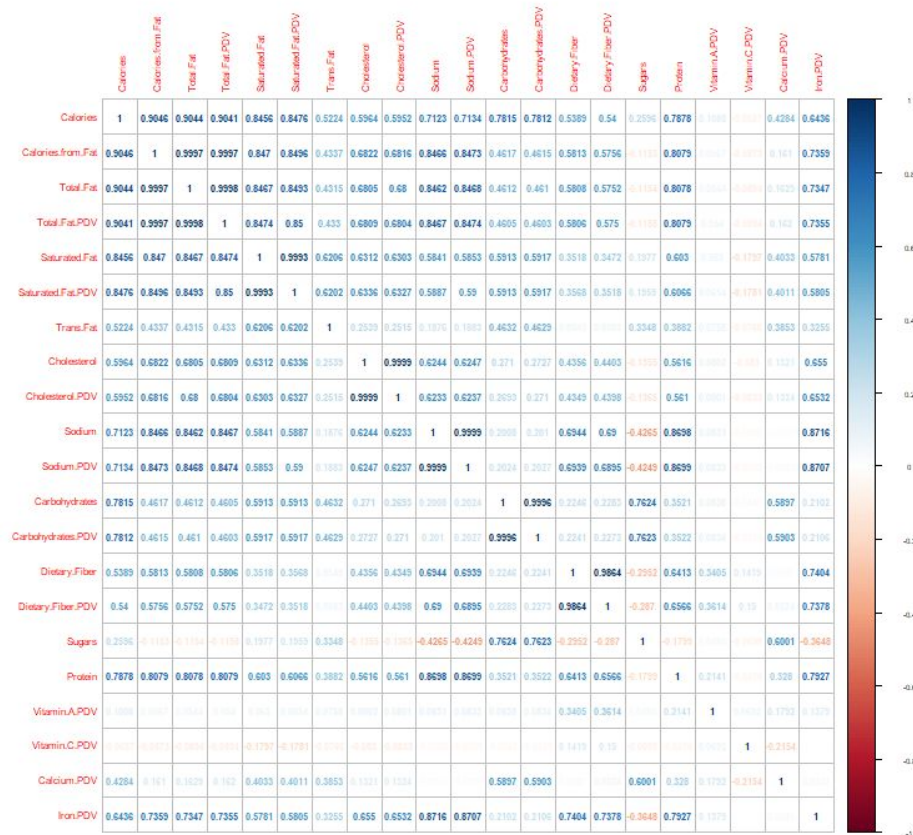

Box Plot of Variables - 2

Q3. Which variables have the highest correlation? Plot them and find out the value?

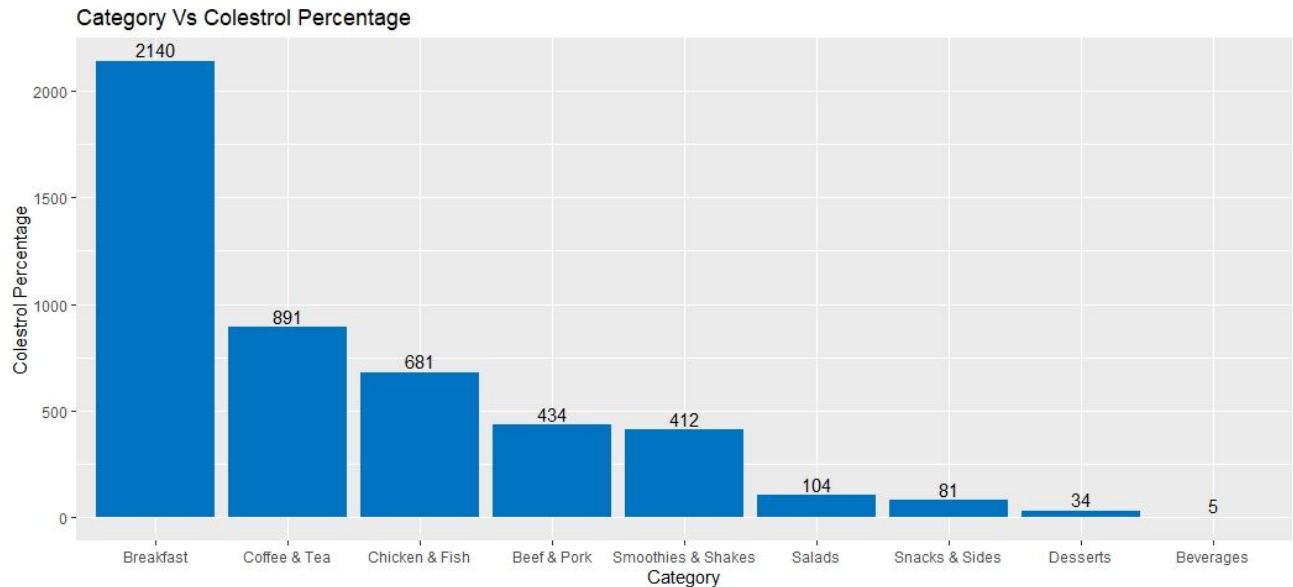

Ans. Variable having correlations of more than 0.85 are as follows

1. "Calories" - Calories.from.Fat, Total.Fat, Total.Fat.PDV
2. "Calories.from.Fat"- Calories, Total.Fat, Total.Fat.PDV
3. "Total.Fat"- Calories, Calories.from.Fat, Total.Fat.PDV
4. "Total.Fat.PDV"- Calories, Calories.from.Fat, Total.Fat,
5. "Saturated.Fat"- Saturated.Fat.PDV
6. "Saturated.Fat.PDV" - Saturated.Fat
7. "Cholesterol"- Cholesterol.PDV
8. "Cholesterol.PDV"- Cholesterol
9. "Sodium"- Sodium.PDV, Protein, Iron.PDV
- 10 "Sodium.PDV"- Sodium, Protein, Iron.PDV
- 11 "Carbohydrates"- Carbohydrates.PDV
- 12 "Carbohydrates.PDV" - Carbohydrates
- 13 "Dietary.Fiber" - Dietary.Fiber.PDV
- 14 "Dietary.Fiber.PDV" - Dietary.Fiber
- 15 "Protein" - Sodium Sodium.PDV
- 16 "Iron.PDV" - Sodium Sodium.PDV

Q4. Which category contributes to the maximum % of Cholesterol in a diet (% daily value)?

Ans. Breakfast contributes maximum % of Cholesterol in a diet

Q5. Which item contributes maximum to the Sodium intake?

Ans. "Chicken McNuggets (40 piece)"

Q6. Which 4 food items contain the most amount of Saturated Fat?

Ans. Item contribute max saturated fat are:

- Big Breakfast with Hotcakes (Large Biscuit)
- Chicken McNuggets (40 piece)
- FrappÃ© Chocolate Chip (Large)
- McFlurry with M&Mâ€™s Candies (Medium)
